

Introduction

Bermuda Paint's True Roof System is an exterior insulating and waterproofing decorative roof system consisting of profiled extruded polystyrene panels that are fastened to an approved deck. A fiber reinforced screen is then applied, and adhered with multiple layers of elastomeric coatings to protect the EPS panels from impact and fire. The resulting system is a hybrid of Bermudian tradition and contemporary adaptability.

Why True Roof?

The answer is simple. True Roof is the superior roofing system custom-made specifically for Bermuda roofs and our climate. Other imitation products do not have the strength or durability that the True Roof system offers. True Roof has been tried and tested and has proven to be the superior roofing system of choice for contractors, architects & homeowners alike.
